

Career Information - CBU

Career development is particularly important at CBU Architecture. Students complete a five-course sequence in the required curriculum specifically designed for superior career preparation and development:

- ENT 375 Small Business Management
- BUS 475 Project and Team Management
- ARC 370 Professional Preparation
- ARC 514 Project and Client Development
- ARC 570 Professional Practice

[CBU's Career Center](#) provides robust, comprehensive support including assistance with resume and cover letter writing, mock interviews, LinkedIn profile development, and networking events throughout the year. Through their Handshake platform, the career center is an effective tool for assisting architecture students in finding open positions in our community.

Beyond university-wide services, the architecture program hosts an annual Career Day each March featuring 18-24 local and regional firms in a day-long event. Students network with employers—many represented by CBU alumni—for internship and employment opportunities. A recent list of attendees include: ABWE, BGW, BRR, Devcon, Gensler, Gray, HMC, LPA, Riseponet, Ruhnau Clarke, RQ Construction, SGH, TR Design Group, Visioneering, DLR, PBK, Holt, HPI, Go Architects, KHS, Lionakis, Miller, MVE. In addition, we invite firms to conduct focused lunch and learns during the academic year, providing students opportunities to learn more about specific offices and allow for networking connections.

Additional internship and employment opportunities exist through CBU Architecture's partnership with International [Virtual Internships](#), a matchmaking organization that connects students with firms worldwide for academic credit-based internships. These opportunities enable students to diversify their resumes with international remote work experience.

Finally, CBU Architecture maintains strong connections with several international missionary organizations where students can participate in service learning and mission work. Students have collaborated with 100 Fold, Engineering Ministries International, Journeyman, Global Europe Missions, and other organizations.

While not all architecture graduates pursue conventional architectural practice, CBU Architecture provides a solid foundation for traditional practice pathways and boasts a very high placement rate upon graduation—especially within the Inland Empire region of Southern California, where many CBU Architecture students call home.
