WHAT IS RED VS BLUE

Two teams face off in a live, browser-based cyber arena. The Red Team attacks. The Blue Team defends real systems, keeps services online, and races to complete objectives before time runs out. A live scoreboard, timed intel drops, and plant-and-defuse missions keep every round fast and competitive.

RED

Attack

- Probe and infiltrate the network
- Plant the payload and stay hidden
- Outsmart the defenders

BLUE

Defend

- Keep critical services online
- Hunt intruders and defuse threats
- Earn points for every minute of uptime

WHY BUSINESS STUDENTS

- **Cyber risk is a business problem.** Breaches cost millions. Employers want leaders who understand security.
- **Decision-making under pressure.** Practice triage, prioritization, and communication on the clock.
- **Built for beginners.** Guided objectives, right in your browser. No coding needed to jump in.
- **It stands out.** A live cyber competition is a talking point in any internship interview.

HOW IT WORKS

1

JOIN

Open the arena link in any browser

2

BRIEF

Meet your team and get your mission

3

BATTLE

Attack or defend in live rounds

4

SCORE

Watch the leaderboard update live

VIRTUAL INFO SESSION

Join Steven Perumean, founder of Scholar-Secure, for a short online walkthrough of the arena, a live demo, and how to sign up. Bring your questions.
